

HEAVY DUTY ELECTRIC CARGO BIKES

Laplandar

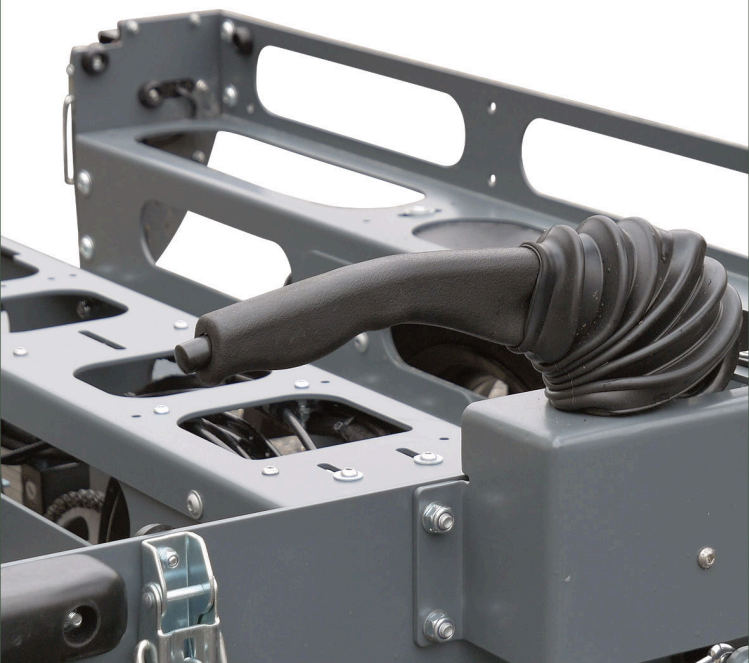

DESIGN

- Laplandar designs and manufactures electric cargo bikes for businesses.
- Every part of the bike from the chassis down to a single bolt is quality. Steel parts are bent and powder coated, the driving chain is in fact a motorcycle chain, and the ignition is normally used in rally cars.
- Laplandar bikes are made to be used every day all day. And the only way for us to guarantee that is by building a bike that can take it all.

CARGO BAY

- The cargo bay of Laplandar bikes is a blank canvas for the user.
- The modular cargo boxes are ideal for business that frequently move smaller loose goods.
- The steel flatbeds are good for bulkier items or furniture.
- And simply the frame is ideal for moving entire pallets directly from the warehouse to the store downtown.

DEALERS

- Laplandar bikes are sold directly to businesses or via our dealers and retailers.
- Laplandar is expanding throughout Europe and is actively looking for new dealers.
- For dealer enquiries please reach out via the contact details in this brochure.
